### MAIN FEATURES

In the three months ended March 1982 750,200 working days were lost, compared with 656,800 in the March quarter 1981 and 1,075,000 in the March quarter 1980.

For disputes which ended in the March quarter 1982-

69% were of 2 days or less duration and accounted for 51% of the workers involved but only 9 per cent of working days lost;

60% of the working day lost resulted from a dispute over a log-of-claims in the coal mining industry in New South Wales and Queensland.

Wages issues accounted for only 23.6% of disputes but 80.1% of working days lost.

# **EXPLANATORY NOTES**

#### Introduction

This publication contains quarterly statistics of industrial disputes. Monthly figures for the period have previously been published in less detail in the monthly Industrial Disputes, Australia (6321.0).

- The quarterly statistics of industrial disputes according to duration, cause, method of settlement, distribution of number of workers involved and distribution of total working days lost shown in Tables 3 to 7 refer to disputes which ended in the quarter, irrespective of when they commenced. The statistics include any workers involved and any working days and wages lost in previous quarters as well as in the current quarter. They may therefore differ from quarterly figures in Tables 1 and 2 which refer to all disputes that started or were in progress during the quarter, irrespective of whether they had ended during the quarter or continued into the next period and which cover only those workers involved and those working days and wages lost during the current quarter.
- 3. The statistics of industrial disputes are compiled according to the Australian Standard Industrial Classification (ASIC), described in Australian Standard Industrial Classification, 1978 Edition, Vol. 1 (1201.0). Prior to 1980 the statistics were compiled on the basis of the Preliminary Edition, 1969.

# Coverage

- The statistics relate only to disputes involving stoppages of work of ten man-days or more at the establishments where the stoppages occurred.
- The figures of working days and wages lost relate to the losses due to industrial disputes (as defined in paragraph 9) and not to aggregate losses for the economy as a whole. For example, effects on other establishments, such as stand-downs because of lack of materials. disruption of transport services, power cuts, etc. are not measured by these figures. Also, some workers involved in industrial disputes may obtain work at other establishments while a dispute is in progress. It is also possible that some or all of the total man-days and wages lost in any particular dispute may be made up through working longer hours or increasing the work force at other establishments, or at the establishments involved in the dispute after work has resumed.
- Reports of stoppages of work are obtained from (a) employers and trade unions, (b) government departments and authorities, (c) State and Federal industrial arbitration authorities, and (d) trade journals, employer and trade union publications and newspapers. The statistics of industrial disputes are compiled mainly from data obtained from employers (both private and government) and trade unions concerning individual disputes and from reports of government authorities. Particulars of some stoppages (for example, those involving a large number of establishments) may have been estimated and the statistics therefore should be regarded as giving only a broad measure of the extent of industrial disputes (as defined).
- Stoppages of work occurring at different times and at different establishments, but due to the same cause, may be regarded as one industrial dispute. However, an industrial dispute occurring in more than one State or Territory is counted as a separate dispute in each State or Territory and in the total for Australia. A dispute involving workers in more than one industry in a State or Territory is counted only once in the number of disputes in the industry that has the largest number of workers involved; but workers involved, working days lost and estimated loss in wages are allocated to their respective industries.
- 8. For statistics of industrial disputes for earlier periods see Labour Statistics, Australia, 1980 (6101.0) and earlier issues of this publication.

# AUSTRALIAN BUREAU OF STATISTICS Canberra

#### **Definitions**

- 9. For these statistics an *industrial dispute* is defined as a withdrawal from work by a group of employees or a refusal by an employer or a number of employers to permit some or all of their employees to work, each withdrawal or refusal being made in order to enforce a demand, to resist a demand, or to express a grievance. Stoppages of work not directly connected with terms and conditions of employment (e.g. political matters, fining and gaoling of persons) are included in the statistics.
- 10. Workers directly and indirectly involved refer to wage and salary earners only. Excluded are persons who are self-employed (e.g. building sub-contractors, owner-drivers of trucks) and employers.
- 11. Workers directly involved are those who actually participated in the dispute in order to enforce or resist a demand or to express a grievance.
- 12. Workers indirectly involved are those thrown out of work at the establishments where the stoppages occurred, but who are not themselves parties to the dispute. Workers thrown out of work at establishments other than those where the stoppages occurred are excluded. (See paragraph 5.)
- Total workers involved for any period of time are obtained by adding together the number of workers involved in each dispute in the period. For any period of time the figures may include details of the same workers involved in more than one dispute. The longer the period of reference the more chance there is of some double counting in the number of workers involved. Where there are varying numbers of employees involved during the progress of a dispute the figures of workers involved included in the statistics relate to the largest number of individual workers involved on any one day. Generally, the total number of workers involved for each quarter will equal the sum of the total number of workers involved in the first month of a quarter plus the number of workers newly involved in the second and third months (as published monthly in Catalogue No. 6321.0). Differences between monthly and quarterly aggregates can occur due to temporary cessations in the first month of the quarter of stoppages resuming in subsequent months. Workers re-involved in this type of dispute are not classified as workers newly involved in stoppages in the second quarter in which the dispute occurs.
- 14. Working days lost refer to man-days lost by workers directly and indirectly involved in the dispute and figures are generally as reported by parties to the dispute. For some disputes working days lost are estimated on the basis of the number of workers involved and the duration of the dispute.
- 15. Estimated loss in wages represents the amount of wages and salaries lost by workers directly and indirectly involved in the dispute and the amount is generally reported by parties to the dispute. In some cases the loss in wages is estimated on the basis of working days (or hours) lost and the estimated average daily (or hourly) wage or salary of the employees involved. For some disputes there is no loss in wages.

#### Causes

16. The statistics of causes of industrial disputes relate to the causes of stoppages of work. The statistics therefore do not reflect the relative importance of all causes of disputes between employers and employees. The classification of causes is as follows:

Wages. Claims involving general principles relating to wages (e.g. increase (decrease) in wages; variation in method of payment) or combined claims relating to wages, hours or conditions of work (in which the claim about wages is deemed to be the most important; combined claims in which other claims are deemed to be the most important are included under other causes).

Hours of work. Claims involving general principles relating to hours of work (e.g. decrease (increase) in hours; spread of hours).

Leave, pensions, compensation provisions, etc. Claims involving general principles relating to holiday and leave provisions, pension and retirement provisions, workers' compensation provisions, insertion of penal clause provisions in awards, etc.

Managerial policy. Disputes concerning the managerial policy of employers—computation of wages, hours, leave, etc. in individual cases; docking pay, docking leave credits, fines, etc.; disciplinary matters including dismissals, suspension, victimisation; principles of promotion and filling positions, transfers, roster complaints, retrenchment policy; employment of particular persons and personal disagreements; production limitations or quotas;

Physical working conditions. Disputes concerning physical working conditions—safety issues; protective clothing and equipment; first aid services; uncomfortable working conditions, etc.; lack of, or the conditions of, amenities; claims for assistance; shortage or poor distribution of equipment or material; condition of equipment; new production methods and equipment; arduous physical tasks; etc.

Trade unionism. Disputes concerning—employment of non-unionists, inter-union and intra-union disputes, sympathy stoppages in support of employees in another industry, recognition of union activities, etc.

Other. Disputes concerning—protests directed against persons or situations other than those relating to the employer/employee relationship, i.e. political matters, fining and gaoling of persons, protests against lack of work, and lack of adequate transport; non-award public holidays; accidents and funerals; no reason given for stoppages; etc.

### Methods of settlement

17. Statistics of the method of settlement of industrial disputes relate to the method directly responsible for ending the stoppage of work and not necessarily to the method (or methods) responsible for settling all matters in dispute. For these reasons they do not reflect the relative importance of the work of authorities operating under State and Federal legislation. The classification of methods of settlement is as follows:

Negotiation. Private negotiation between the parties involved, or their representatives, without the intervention or assistance of authorities constituted under State or Federal industrial legislation.

Mediation. The arbitration or mediation of persons whose intervention or assistance is not based on State or Federal industrial legislation.

State legislation.

- (a) Under State conciliation and arbitration or wages board legislation. Intervention or assistance of an industrial authority or authorities created by or constituted under State conciliation and arbitration or wages board legislation, or reference to such authorities or compulsory or voluntary conference.
- (b) Under other State legislation. Intervention, assistance or advice of State government officials or inspectors.

Federal and joint Federal-State legislation.

- (a) Compulsory or voluntary conference or by intervention or assistance of, or reference to, the industrial tribunals created by or constituted under the following Acts: (i) Conciliation and Arbitration Act, (ii) Coal Industry Acts, (iii) Stevedoring Industry Act, (iv) Other Acts (Snowy Mountains Hydro-electric Power Act; Navigation Act; and the Public Service Arbitration Act).
- (b) Intervention, assistance or advice of Federal government officials or inspectors.

Filling the places of workers on strike or locked out.

Closing down the establishment permanently.

Resumption without negotiation. This category may include some disputes which are settled subject to negotiation of a formal nature. Stop-work meetings are included, and this category may also include disputes settled by 'resumption' as stated, but about which no further information is available.

Other methods.

## Related publications

18. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

## Symbols and other usages

- nil or rounded to zero
- r revised
- 19. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
